

Data Foresight

Data Foresight is a data security and protection solution. This solution offers modules like Data Security Posture Management (DSPM). Data Discovery - Classification - Risk Quantification and Mitigation are the features of DSPM. It integrates with other solutions for mitigation and risk identification.

DATA PRIVACY IS A NECESSITY. THERE IS ENOUGH WRITTEN AND SPOKEN ABOUT SECURITY AND PRIVACY OF DATA. THERE ARE SEVERAL REQUIREMENTS FOR DATA PRIVACY AND SECURITY.

Data Breaches

Compile an internal Data Breach Registry log of any violations including personal data. The events surrounding the breach, the ramifications, and the implemented remedial measures should all be included in the data breach registry.

Data Collection

Facilitate users to request information effortlessly, and offer swift responses to such requests. When accumulating users' personal information, convey reliable information to them and provide relevant information if you do not obtain it directly from them.

Data Accuracy

Ascertain that sensitive information is updated and that the processes essential to modify and amend inaccurate data are in place.

Data Privacy Policy

Indicate in a data privacy statement how a website will handle personally identifiable information. It should contain details concerning the data acquired by the website, what data is acquired, how the company proposes to use the data, and a notice concerning the use of cookies.

Regarding the security and privacy of data, Data Foresight stands out as a state-of-the-art remedy. Ensuring the confidentiality, integrity, and accessibility of vital information, Data Foresight's cutting-edge solution enables full protection against data breaches. Data Foresight has entirely altered how data is safeguarded with its robust capabilities and intelligent algorithms.

Data Foresight comes with various features with great benefits:

- ☑ **Automation - based classification** - Data Foresight can classify data automatically.
- ☑ **Enhanced data visibility** - It enables the organization to make informed decisions about the type of information made available which is up to date.
- ☑ **Faster ROI** - It's a product that is pocket - friendly and gives a good return on investment.
- ☑ **Risk Management** - Identifying the risks and mitigating them is one of the features of Data Foresight.
- ☑ **Covers all data types** - Data Foresight covers a vast scope of data.
- ☑ **Data Discovery** - Data Classification , Data Remediation Like Masking , Encryption , Transfer to vault , Data Deletion
- ☑ **Cost Effective** - Data Foresight is a pocket-friendly solution, with the Pay-As-You-Go Model made available for the customers to select modules based on their companies' requirements.
- ☑ **Highly Scalable** - This solution can adapt to large data and expanding workloads.
